

Process Automation—Disrupted!

Oracle Integration Cloud's Process Automation

This year's Oracle Open World sessions by Oracle's Amit Zavery, Senior Vice President Product Management, and Vikas Anand, Vice President Product Management, showcase the latest innovations for Oracle Integration Cloud's Process Automation platform. These game-changing developments extend our industry-leading integration capabilities with Robotic Process Automation, Adaptive Case Management, and Best Next Actions that empower you to quickly iterate on the complex, hybrid cloud challenges posed by unstructured processes and legacy systems.

Here's a sneak peek at what's coming your way:

Robotic Process Automation

Got legacy apps that may never expose modern APIs? Need to streamline and simplify end-to-end process execution? Robotic Process Automation leverages simple-to-use, non-intrusive record-and-replay to capture routine human work using API-first robotic execution. This enables you to:

- » Extend your existing integration capabilities for all your legacy and data systems.
- » Quickly assemble UI navigation recordings for rapid integration and automation.
- » Cut repetitive work errors to speed time to market and lower your compliance costs and risks.

Best Next Action

Who *doesn't* want to optimize their digital workforce? With OIC's new adaptive intelligence capabilities, you get:

- » Advanced rules and visual decision modeling using DMN standards, which leads to smarter processes overall.
- » The ability to leverage AI apps, so you can make your existing domain processes simpler and more intuitive.
- » Predictive Machine learning workflow intelligence, so you can deliver guided experiences and lower your training costs.

ORACLE
CLOUD PLATFORM

Adaptive Case Management

With Oracle's new Case Management Modeling capabilities, now it's easier than ever to automate dynamic and unstructured business processes for Fintech, Healthcare, Manufacturing, and Public Sector firms dealing with regulatory, technology, and competitive disruptions.

For digital transformation teams, Oracle offers:

- » The most extensive modeling capabilities in the market, so you can continuously innovate on complex work streams and quickly scale what works.
- » Structured and unstructured process automation, including dynamic task allocation.
- » API quick-connect to intelligent apps and data, so you get vastly improved, machine learning-based approval recommendations. Fact-based recommendations are based on both past behavioral profiles and best-in-class, domain-specific services from the Adaptive Intelligent Applications portfolio.
