The Messaging Backbone to Power Today’s Businesses
Can you answer yes to any of these questions?

- Do you need to connect application components that were developed independently, such as web services and the database back ends to support them?
- Do your application components exist on-premises and in the cloud?
- Is your development team using standards, such as REST and Java Message Service (JMS)?
- Do you need an enterprise-grade solution that’s reliable and secure?
- Do you need to associate your messaging service with an integrated billing, monitoring, and account management tool?
Oracle Messaging Cloud Service is for you.

Automate and be innovative. Connect devices and applications on premises or in the cloud.

Build your application’s components independently, and then use Oracle Messaging Cloud Service to bring them together as a complete application deployment.

Rely on a proven cloud service to provide advanced security and high availability features that support critical application messaging requirements.

Scale your messaging infrastructure whenever you need to, using a cost-effective, self-managed, cloud-based service.
Everything you need to make your systems communicate with each other.

We’ve got it.

Communication Made Easy
Connect anything, anywhere in a hybrid IT environment. Use communication patterns that best match your business needs.

Reliable and Secure
We offer a complete set of features to support your business needs from day one. If your business has serious reliability and security requirements, then this service is for you.

Scale with Your Business
As your business grows, you can easily scale your messaging solution.
Flexible and Standards-Based

Flexible
- Components developed on-premises and in the cloud can communicate
- Components developed in different languages or on different platforms can communicate

Standards-Based
Oracle Messaging Cloud Service supports:
- REST APIs and Java Message Service (JMS)
- Common communication patterns, such as Queues (one-to-one) and Topics (one-to-many)
A **reliable and secure** messaging solution.

Keep things running with little manual intervention. Implement transactions to send and receive a group of messages, choose a way to acknowledge and keep messages, and set up different failover and retry policies to handle unforeseen failures.

As with other Oracle Public Cloud services, you manage users and roles through the integrated identity and access management capability. Oracle Messaging Cloud Service supports HTTP basic authentication and has other security features, such as tokens to prevent cross-site request forgery (CSRF) attacks.
Manage and scale **with ease.**

Managing your messaging solution is easy with our web-based integrated account management and monitoring solution. You can manage user accounts and access privileges, generate reports with your usage statistics, and check your current quota.
