

Oracle Supply Chain Collaboration Cloud

ORACLE[®] SUPPLY CHAIN MANAGEMENT CLOUD

Today's supply chains are global, outsourced and digital. Your competitive advantage depends on working seamlessly with your trading partners—you can no longer afford to rely on emails or phone calls to deal with material shortages or delivery problems. You need a modern business-to-business platform that automates your trading partner processes and alerts you to issues as they occur. Oracle Supply Chain Collaboration Cloud enables you to plan supply with your partners, manage contract manufacturing activities and monitor business-to-business messaging. By involving partners in the decision-making process, so you can collaboratively identify and resolve supply chain disruptions. The result? More reliable and responsive trading relationships that contribute to your bottom line.

KEY FEATURES

- Create and manage trading partner networks
- Collaborate via portal, web services and B2B messaging interfaces
- Share order forecasts and get supplier commitments
- Collect and process contract manufacturers' production reports
- Tailor processes to your business needs
- Manage trading partner exceptions, delays and changes
- Support order-to-cash and source-to-settle data interchange

KEY BENEFITS

- Improve partner reliability and accountability
- Reduce inventory liability exposure
- Respond more quickly to supply and demand changes
- Reduce trading partner administration costs

Collaborate on a Common Platform

Not all partners are alike. Some have sophisticated IT departments, but others have no internal systems of their own. You need to be prepared to work with all of these companies – big and small. Oracle Supply Chain Collaboration Cloud offers three different ways to interoperate:

- A portal-based user interface with dedicated applications for planning collaboration and production status updates
- B2B message interchange via the Collaboration Messaging Framework
- A library of collaboration web services

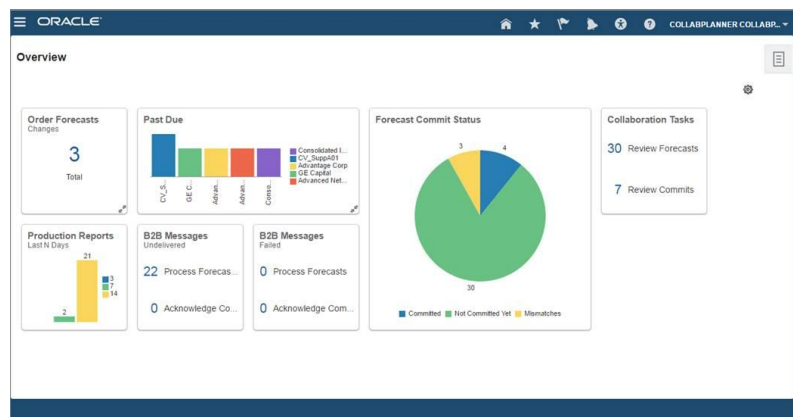

Figure 1. Visualize and address trading partner issues as they occur

You manage the scope, expected service level and other attributes of the trading relationship in one place, regardless of which interaction approach your partners choose. Every business-to-business interaction is tightly integrated with Oracle Supply Chain Cloud applications – no additional assembly is required.

Orchestrate Business-to-Business Processes

You need to tailor your collaboration processes as your business strategies evolve, so Oracle Supply Chain Collaboration Cloud is built on a flexible orchestration infrastructure. It allows you to add process steps, adjust business rules, and monitor the execution of business-to-business processes. Pre-seeded processes for planning collaboration and contract manufacturing extend the reach of your Oracle SCM Cloud applications to your extended supply chain.

Planning Collaboration

You can share order forecasts with suppliers and get their commitment to deliver critical components, assemblies and materials when you need them. Effective forecast collaboration can also uncover opportunities to reduce costs or improve supply quality.

Figure 2. Use planning collaboration to ensure supply reliability

Suppliers can upload their commitments via spreadsheets, enter them online, or transmit them via B2B messages or web services. Oracle Supply Chain Collaboration Cloud tracks the responses and alerts you if a supplier's commitments are late. If a commitment falls short, you can negotiate and make changes on a supplier's behalf when needed. You can complete the cycle by exchanging pre-integrated source-to-settle messages with the supplier.

Contract Manufacturing Collaboration

Contract manufacturing can lower your costs and enhance your capacity to deliver, while allowing you to focus on your brand. However, it can also expose you to significant risk of supply disruptions. Contract manufacturing collaboration can help you reduce these risks by providing more complete and timely visibility into production status.

RELATED PRODUCTS

Oracle Planning Central Cloud provides foundational demand and supply planning.

Oracle Supply Planning Cloud plans material and capacity and responds to demand, availability and resource issues as they occur.

Oracle Manufacturing Cloud defines and executes production for both in-house and contract-manufactured goods.

Oracle Order Management Cloud centralizes and standardizes your order fulfillment across multiple sales channels.

Oracle Procurement Cloud integrates sourcing, contracts and purchasing of goods and services.

Contract manufacturers can upload their production reports via spreadsheet, using a simple portal-based user interface. Oracle Supply Chain Collaboration Cloud then automatically updates the work order completion status and material usage in Oracle Manufacturing Cloud.

Interoperate with Standards-Based B2B Messaging

Managing communications with hundreds of suppliers, logistics providers and other companies is time-consuming and error prone. Oracle Supply Chain Collaboration reduces the effort and cost of collaboration by leveraging a revolutionary messaging platform called the Collaboration Messaging Framework. It not only maps and routes standards-based messages to individual trading partners; it interoperates with popular network provider networks. That way, a single out-of-the-box connection can support an entire community of partners. The network provider takes care of any translations to EDI, flat file or other formats, so you don't have to worry about technical details.

Collaboration Messaging Framework offers out-of-the-box OAGIS-standard messaging preintegrated with Oracle Supply Chain Management Cloud applications for the most common business-to-business processes:

- *Source-to-Settle Collaboration:* process purchase order, change purchase order, process shipment, process invoice
- *Order-to-Cash Collaboration:* process purchase order (inbound), acknowledge purchase order, shipment advice, change purchase order, acknowledge change purchase order, cancel purchase order, process shipment
- *Planning Collaboration:* process planning schedule, acknowledge planning schedule

Extend Your Supply Chain for Strategic Advantage

In the digital era, even the best company working in isolation can't prevail over well-integrated competitors. To win, your supply chain has to beat their supply chain. Oracle Supply Chain Collaboration Cloud brings the simplicity, power and scale of Oracle Cloud applications to business-to-business processes, offering you a strategic advantage over ad hoc communications. It's a platform that can grow and evolve at the pace of your business.
